

Rf security systems

Radiofrequency security door Market security door(RF007)

Product description

Size: 150 x 50 x 6 cm

Detection door distance: 0.9 meters (soft label) - 1.3 meters (hard tags)

Material: Aluminium profile

Characteristics:

1. PIF detection technology: through the digital comb filter extraction submerged in noise of the response signal, greatly enhance the system detection rate;
2. Soft hard label operation method choice effective distinction;
3. Identity identification technology: in emission modulation editing identity information identification number, different from the traditional sense of frequency hopping;
4. Advanced pulse AGC technology, and at the same time, double screening AGC adaptation ability stronger;
5. High permeability filter enhancement resist electric field interference ability;

More suitable for supermarkets is narrow at the door of the shop.
